

LA MUTINE

Schooner from 1824

This work includes the full framing plans.

1/36 Scale

Franco FISSORE

Translation by Gilles Korent

serve in combat, these schooners took part in the 1823 Spanish Expedition prior to being used as stationary vessels in the Antilles. There, their purpose was coastal surveillance and the fight against contraband. Their weak artillery, 2 carronades, a few swivel-guns and blunderbusses, was sufficient to intercept vessels involved in the slave trade and to enforce the declaration from the Vienna Treaty, 1815, through which European powers were committed to abolish the trade.. This would only have a real effect during the 1830's.

The technical aspect of the construction of these vessels from the Restauration Period is referenced through the *Mutine*, a schooner built in 1824 according to the 1823 standard design by builder Delamorinière .

Construction and fitting-out the vessel are detailed through numerous plans and illustrated by photos of the model built by the author.

The present book will also be valuable to modelers new to dockyard style work, while enabling them to build an attractive model of a type of vessel fairly uncommon in the French military navy, but quite popular in recreational boating during the 19th century; a type of vessel that never disappeared.

COMPOSITION OF THE MONOGRAPH

A cardboard folder with flaps containing a 116-page brochure with over 170 colour photographs or drawings, where available. One chapter explains in detail the construction of the vessel and its artillery.

The monograph contains the 24 plans required for the construction of the frame.

- BROCHURE FORMAT 23 X 31 INCLUDING:

- Ch. 1 - The French navy schooners
- Ch. 2 - Report on the inspection of the *Topaze* and the *Émeraude*
- Ch. 3 - Development of the construction plan
- Ch. 4 - Description of the plates
- Ch. 5 - Construction of the ship's boat
- Ch. 6 - Artillery
- Ch. 7 - Rowing system
